

Event Based Asset Management System

Christian Bissett

What is EBAMS

EVENT Based Asset Management

All Major events related to an asset can be tracked in a social media like timeline to tell a narrative and provide decision makers the information they need to make informed decisions.

Dispatches, Maintenance events, Part Arrivals and Installations are all tracked as a STORY of what an asset goes through.

Comments attachments and differentiation between human content and automated history to enhance story telling ability.

EBAMS as a General Management Software

Has Tools to serve as a foundation for a dispatch management tool
ready for YOU to extend to YOUR needs

Improvements over Current Methods

Cost Efficiency

Application can Scale Without Additional cost.

No Complex Contracting process.

Ease of Use Saves Time.

Event Based Tracking

Every Maintenance Activity, Dispatch, and Configuration Change **Tells a Story**.

At a glance information to make decisions.

Better accountability tracking via comments.

Enhanced Downtime Tracking

Multiple Columns to track Capability Limitations, Limitation Types, Lost Time and Blockers.

Policy Drives Software

- Current Software Providers Do Not respond or implement to mission critical features for NSW.
- EBAMS is Directly Accountable to YOU.
- Onsite Ownership of code and AI enhanced coding allows decision makers to make a statement and then have immediate updates.

Cost

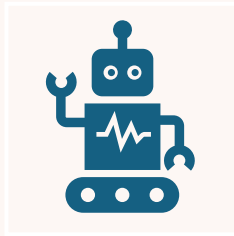

Locally hosted and infinitely scalable

You OWN the data

No Surprise Licensing Cost.

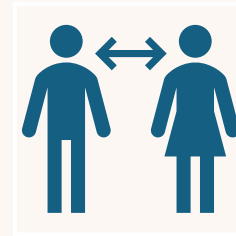

Unlimited users and Assets.

AI ready

Built By AI for AI.

Features can be implemented by a small team Rapidly

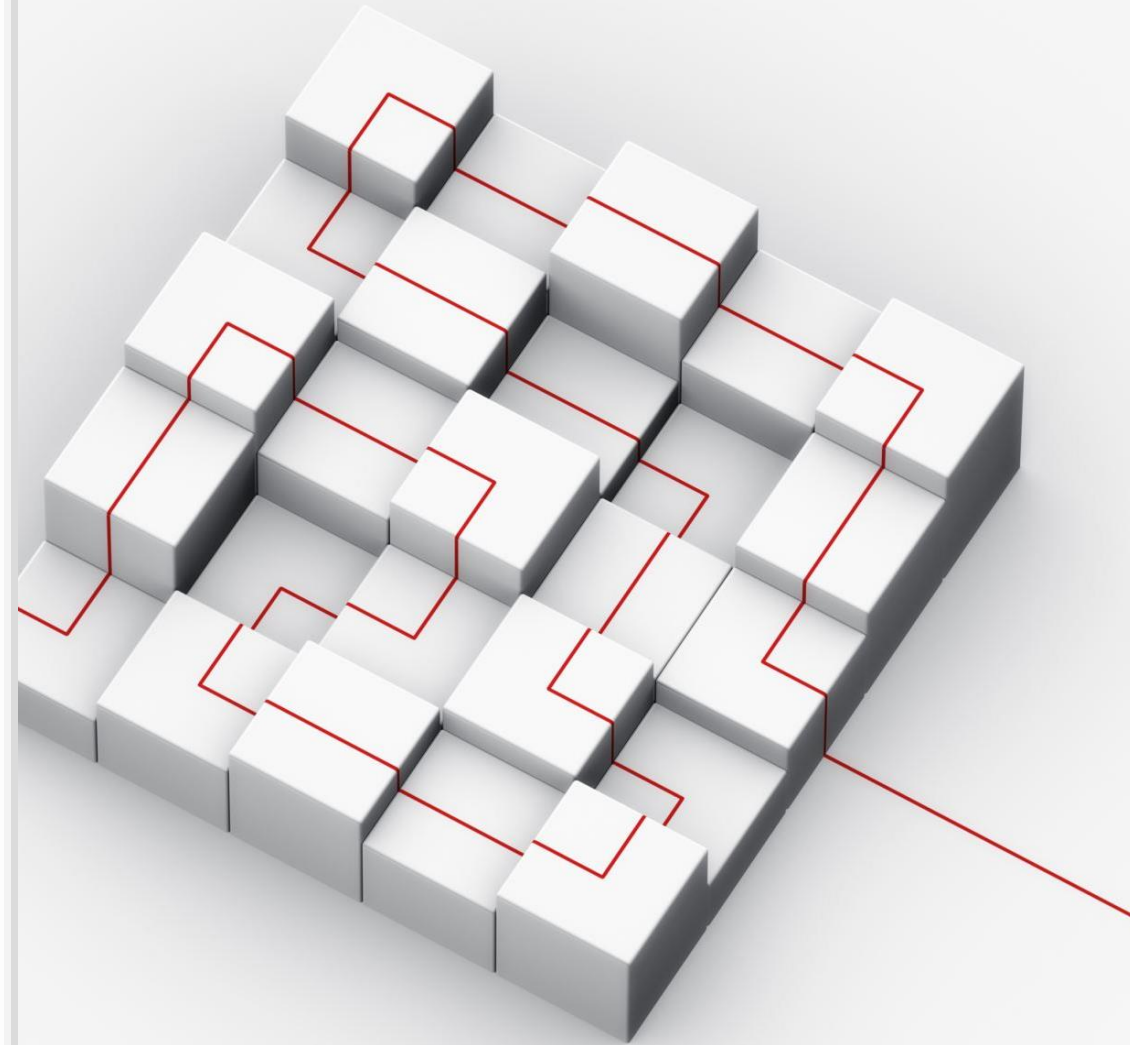

Policy Drives Software

Saved time from quick adjustments to meet the needs of users in the field.

AI enabled Architecture

- Written using teams of agents and modern AI commands
- Uses a Simple Modern tech stack
 - Python, Flask, Bootstrap, HTMX, SQL alchemy
- Architecture is optimized for AI feature integration
 - AI prefers a simple folder structure with plain English names
 - Layered data business and presentation architecture directs AI Directly to problems
- Layered independent and EXTENDABLE modules so that changes in one module don't break other modules for fast prototyping.

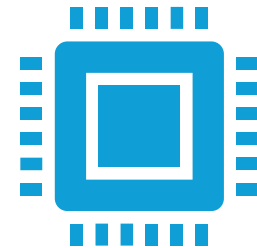

Enhanced Maintenance Model

Visually Intuitive work platform
makes it easier for technicians to
record work properly

Features Designed to directly track
temporary modifications and
capability limitations

Automatic Maintenance Planning
with Conditional Logic based on
Time, Usage, or Both

Maintenance Modules

- Work Portal
- Template Design
- Daily Scan and Auto generation of overdue maintenance
- Integration with Technical Library

The screenshot shows a 'Maintenance Status' interface. At the top, a progress bar indicates 33% completion (1/3 Actions). Below this, a summary shows 3 Total actions, 1 In Progress, and 1 Complete. Action buttons include 'Mark Complete', 'Place in Blocked Status', and 'Add Capability Limitation'. The 'Maintenance Event Details' section displays fields for Task Name (Toyota Corolla Oil Change Procedure), Description (N/A), Asset (VTC-002), Planned Start (2024-01-15 08:00), Actual Start (2026-03-13 17:04), Actual End (N/A), Template Source (Toyota Corolla Oil Change Procedure), and Estimated Duration (0.5 hours estimated). A 'Quick Actions' sidebar on the right includes 'View Event' and 'Edit Event'. Below the details, 'Maintenance Actions (3)' lists tasks like 'Drain Oil' and 'Replace Oil Filter' with their respective status and duration. A 'Summary' section on the right provides totals for Actions, Completed, In Progress, Total Parts, and Total Tools.

The screenshot shows the 'EBAMS Maintenance Portal' landing page. The header includes navigation links for Event Portal, Dispatching, Maintenance, Inventory, Asset Management, and Core Management, along with a search bar and a user profile dropdown. The main content area features a 'Maintenance Portal' title and a prompt to 'Choose your portal based on your role'. A large yellow button labeled 'View Events Portal' is prominent. Below this, three role-based portals are displayed: 'Technician Portal' (for viewing assigned work and tracking history), 'Manager Portal' (for creating templates and managing plans), and 'Fleet/Admin Portal' (for fleet-wide dashboards and analytics). Each portal has a corresponding 'Go to' button.

Simple Inventory Process

Portals and Linkage

- Visual tools to make it clear that items are linked to each other
- Purchase orders can be created for stock in advance and linked to maintenance events as they arise

Inventory

Multi Dimensional Status

Approval, Purchasing State, and Physical Issue state of parts

Users often grab parts and self issue without telling supply

Gives users the ability to track the TRUTH and provides tools to make corrections

Visual Stocking and Part finding

Allows inventory managers to select locations within the warehouse and place parts

Move Inventory GUI
Select destination location for inventory movement

Move Details

Part:
OIL-001
Engine Oil 5W-30

Step 2: Select Storeroom
main_storeroom
Los Angeles, CA

Step 3: Select Location

location Viewer

Locations

1-1	9 bins	ID: 3
1-2	0 bins	ID: 7
2-1	0 bins	ID: 2
3-1	0 bins	ID: 6
4-1	0 bins	ID: 5
5-1	0 bins	ID: 4
5-2	0 bins	ID: 1

Inventory GUI

- Users Create an image using open source tools
- Image is automatically parsed to create locations and bins
- Users can accept parts to the warehouse then assign to a location

Configuration Management

- Configuration templates outline what items are expected and the structure of the configuration
- Assets can be assigned templates children and modifications.
- Templates can have Recursive Configuration Expectations for Children
